

Reigate Development - London for Solaglass Limited Completed April 2009

Contract Particulars

Value: £15,000

Contract Period: 6 weeks

Client: Solaglass
Bristol

Site: Reigate Project
London

Date: April 2009

Solinear Solex HALO-100 was specified by the project architect to provide solar shading the glazing facade and protect users of the penthouse terrace during periods of high summer sunshine.

The shading structure provided a 3-sided sunscreen to the building and innovative structural design provided a discreet solution to the 'glass corners' to the building allowing the shading canopy to 'float' around the corner without the need for any corner bracketry so maintaining the glazing integrity and aesthetic requirements at this position.

The shading system projects 1500mm from the glazing facade and has a circular tube feature railing to the front and back edges with a small 100mm wide elliptical solar shading blade profile fitted between profile cut aluminium end plate rafters.
